

Activate Hidden System Resources!

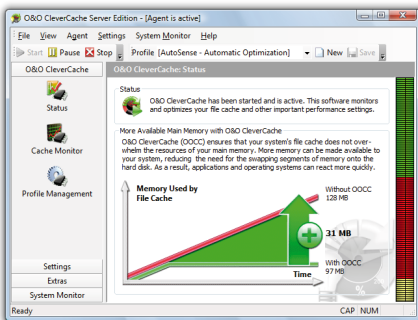

O&O CleverCache 6 is a unique tool that optimizes your file cache Management in Windows 2000, and Windows 2003. This results in an enormous performance boost, sometimes doubling your original system speed without any additional hardware purchases or restrictions to your system's stability. Simply install O&O CleverCache 6 and you are ready to go! Additional configuration or rebooting is not necessary.

O&O AutoSense

With O&O AutoSense O&O CleverCache 6 offers you a pre-defined profile that makes using the software a breeze. The O&O AutoSense profile instructs your system to analyze your system's settings upon every system startup. Whenever changes to the main memory are detected, O&O CleverCache 6 updates its settings accordingly. O&O CleverCache 6 enables you to create your own profile according to your specific needs. This allows you to load your specialized cache settings whenever you need them. This could be, for instance, when you need to do some video editing or play your favorite PC games. O&O CleverCache 6 can also import and export your profiles as you choose.

O&O Mem-O-Free

O&O CleverCache 6 also includes Mem-O-Free technology. Mem-O-Free gives you control over the amount of available memory in Windows. Whenever the amount of free memory falls below the user-defined threshold, Mem-O-Free is activated and frees up additional memory, forcing Windows to swap unneeded data to the hard disk. The result is more available memory for active applications bringing about a substantial rise in performance.

O&O Mem-O-Safe

When you save data to the hard disk, they are not immediately written to disk, but buffered in the internal file cache. After a certain amount of time, these data are written to the disk. How long this takes is determined by Windows, leaving users out the decision process. Windows considers system load as well as other parameters in determining the update interval, usually between 4 and 15 seconds. If during this period a system failure occurs, all data that has not been written to disk is lost. Critical data may be lost, sometimes necessitating a reinstallation of Windows. This situation often occurs during a power failure, user error, or a system crash.

O&O CleverCache 6, with its Mem-O-Safe technology, lets you control and configure the update interval of the file cache on important file servers, for example, to minimize possible losses of data. The configuration of the interval can be changed through the O&O CleverCache 6 applet found in the Control Panel. A short interval is especially important to File and Database Servers that hold critical Business data, in that it minimizes any loss of data sustained in a system crash.

New: System Tuning

The System Tuning feature in O&O CleverCache 6 includes a number of functions that can optimize or accelerate the performance of your operating system. These functions also give you access to system parameters not granted by the standard tools offered in Windows.

System Monitor

The System Monitor enables you to monitor the condition and performance of the most important components of your PC System. With this feature you can receive real-time status reports on, amongst others, your processor, main memory, system cache, and the hard disk.

Product Features

NEW: Windows Vista Compatible

NEW: 64 Bit support

NEW: O&O AutoSense-Profile

NEW: Create, export and import individual profiles

NEW: detailed memory use and cache statistics

NEW: System Tuning and System Monitor

- Mem-O-Free for more available main memory
- Mem-O-Safe for increased security in the event of a crash
- Monitor the most important system components(CPU, Memory etc.), system tuning and advanced control and monitoring with the system tray

System Requirements

- System with Intel® Pentium® 200 MHz or comparable processor
- 64 MB RAM
- 30 MB free hard disk space
- CD ROM drive
- VGA Graphic Card with minimum 800x600 with 256 colors
- Keyboard and Mouse
- Windows 2000 Server, Windows Server 2003, Windows XP, Windows Vista (all Editions)
