

Finally get an overview of hard disk usage!

Combat space wastage and speed up your computer! O&O DiskStat Professional for home users or Server edition for administrators enables you to analyze used space on your hard disk with the help of Charts (Doughnut, Bar or Treemap). As soon as you start the program you are presented with a concise overview of your entire hard disk. With the help of O&O DiskStat, you can identify and dispose of superfluous files, saving yourself valuable hard disk space in the process!

The Detective investigating space wastage on the hard disk

O&O DiskStat in the Professional or Server Edition gives you a quick overview of the usage of your hard disk. You can search by files or folders and establish which ones are taking up the most space and slowing down your system. This versatile tool offers a Windows-Explorer type interface and a whole range of options to combat space wastage.

Get a clear overview with 3D charts and the TOP10 function

After reading the hard disk the user gets an overview of the entire disk. Used space on every partition is displayed in user-friendly charts. The Top 10 function equally displays the largest files on the disk for quick and easy access.

O&O DiskStat Startup

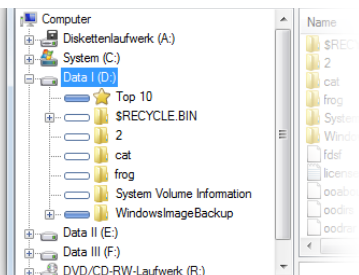

Hugely relevant for companies too

Hard disk usage is not only relevant for home users. Companies often forget that hard disk performance can be drastically affected by ever-expanding storage, slowing down backups, access and defragmentation. The Server Edition has been specially developed to give administrators an overview of hard disk usage over a network.

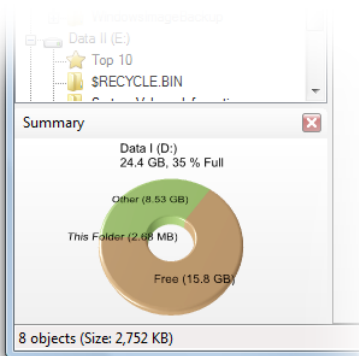

Professional features for administrators

The most important feature of the server edition is that it analyzes network drives. The display can also identify the users whose data is taking up the most space. These results can then be saved as reports in either XML or HTML format. Administrators can then identify early on when the hard disk is reaching capacity and plan for new hardware requirements well in advance.

O&O DiskStat is available in two versions: The Professional version is aimed at private users, and the Server Edition at Administrators. O&O DiskStat is compatible with Windows Vista, Windows XP and Windows 2003/2000.

Hard Disk Chart

Product Features

- An Explorer-like, intuitive interface
- View size of directories, sub-folders and files
- Top 10 of the largest files for each partition
- Multi-faceted sorting by size, type, date modified and space used as a percentage of the directory or partition, amongst others
- Higher performance: initial results can be checked during the reading
- Professional 3D charts (Ring, Bar, Treemaps)
- Simple navigation and operations in 3D charts – all context menus available
- Analysis of network drives (Server Edition only)
- Sort results by owner (Server Edition only)
- Create reports (Server Edition only)

System Requirements

- System with Intel® Pentium® II 400 MHz or comparable Processor
- 256 MB RAM
- VGA Graphic Card with minimum 800x600 with 256 colors
- Keyboard and mouse
- Windows 2000 Professional, Windows XP (all Editions), Windows Vista
Server Edition also supports Windows 2003/2000 Server
