

Data Recovery from Deleted Partitions!

With the new O&O FormatRecovery 4, O&O offers the ultimate supplement to its already impressive line of data recovery products. Guiding users with an onscreen Assistant, O&O FormatRecovery 4 enables the recovery of deleted or formatted partitions or hard disks to their pre-deletion form. File and directory information is likewise restored.

Select Files for Restoration

Recovery of complete storage media

By use of a specially developed algorithm, O&O FormatRecovery 4 can search for files on formatted or deleted disks and restore them even when the data are heavily fragmented! In contrast to O&O UnErase 4 and O&O DiskRecovery 4, O&O FormatRecovery 4 can also restore files with missing directories and configuration information.

Special search algorithms

The advanced functions of the special search algorithms in O&O FormatRecovery 4 enable it to first detect and then ignore defective sectors. This means it can recover data from storage media that is damaged but still accessible. The special algorithm also supports the recovery of hidden or system files with their corresponding attributes, making it possible to recover empty file systems with the chance to reconstruct a whole storage medium.

Supported storage media

O&O FormatRecovery 4 can recover data from all Windows-supported data storage media. This includes, among others, internal and external hard disks (IDE, SATA, SCSI etc.), digital cameras, MP3-Players, USB and Memory-Sticks, memory cards, CDs, DVDs and diskettes. A data storage medium need only be recognized by Windows for a data recovery to be possible.

The rescued data can then be saved on any windows supported storage medium, provided it is not the medium from which the data was just recovered.

Product Issue	O&O UnErase 4	O&O DiskRecovery 4
Recovery of any type of data	+	+
Non-destructive Recovery Procedure	+	+
Accidental File Deletions, Virus Attacks	+	+

Product Features

NEW: Windows Vista Compatible

NEW: 64 Bit support

- Recovery of files and directories
- Supports all Windows file systems on all Windows recognized storage media
- Recovery of hidden or system data including file attributes

- Assistant-guided operation
- Specially developed search algorithm to recover entire data storage media
- Recovery of empty directories and files

System Requirements

- System with Intel® Pentium® III or comparable Processor
- 128 MB RAM
- 30 MB free hard disk space
- CD or DVD Drive
- VGA Graphic Card with minimum 800x600 with 256 colors
- Keyboard and Mouse
- Windows 2000, Windows XP, Windows Server 2003, Windows Vista (all Editions)
