

O&O RescueBox – The First Aid kit for your data

It contains the best O&O tools for data recovery, data imaging, and managing your hard disk. The programs work on every Windows operating system, and can also be started directly from the CD when a functioning operating system is not available. The graphic interface is completely intuitive - using the O&O RescueBox couldn't be easier.

Data Recovery

O&O UnErase, O&O FormatRecovery and O&O DiskRecovery are three high-power software products designed to rescue data. They complement each other perfectly. If you cannot find data with the help of O&O UnErase, you might consider using the more powerful O&O FormatRecovery, or the wide-ranging features of O&O DiskRecovery.

Data Security

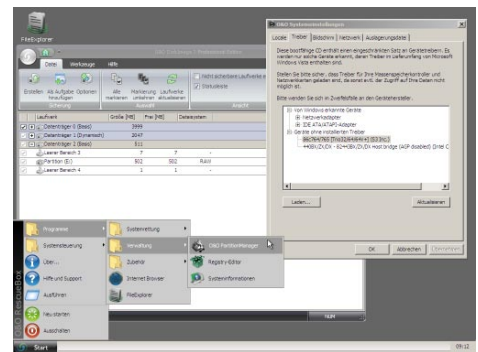

O&O DiskImage can create professional images of your complete system or of individual drives. In the case of an unexpected data loss, this product can turn back time. Simply restore the previously created image onto your computer, and all your data is once again available! The once time consuming installation of the operating system and other applications is now consigned to history.

Manage your partitions

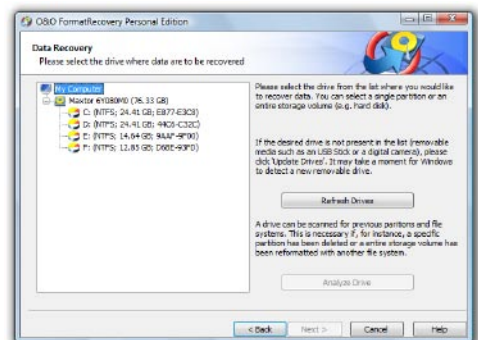

With O&O PartitionManager, you can split your hard disks into partitions, you can move them, and you can change their size. You're in complete control. Besides supporting MBR volumes, the program also recognizes GPT volumes as well as external storage volumes, USB sticks and memory cards.

Start CD

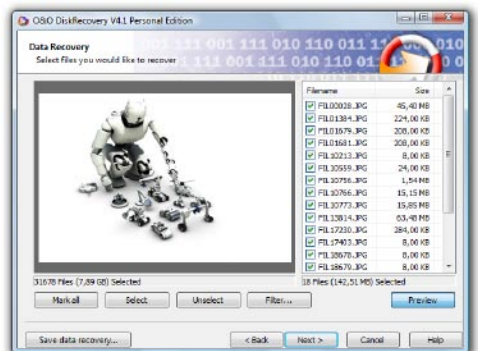

Thanks to the one-of-a-kind Start CD, which is based on Windows PE and carries its own mini operating system, it is now possible to use the programs in the O&O RescueBox without a functioning Windows operating system. Access to your hardware is guaranteed by the Windows drivers, included within Windows PE. To start the O&O RescueBox directly from a CD, there's no need to install any of the programs. If Windows is no longer able to start, simply insert the Start CD and you can restore your system partitions or rescue data.
