

Don't Give Data Spies a Chance!

O&O SafeErase 3 offers a reliable solution for safe deletion of security sensitive files and gives you the ultimate in data protection. O&O SafeErase 3 stops even hackers and data spies accessing your erased files. O&O SafeErase 3 does not simply delete your files; it annihilates them using approved and recommended methods.

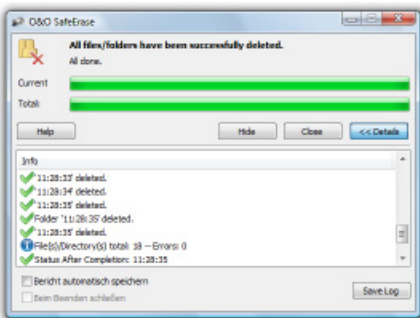

Security settings

Erase your data once and for all!

O&O SafeErase 3 is THE solution for the secure deletion of sensitive data from your hard disk and offers you the ultimate protection of your private sphere. With just one click of the mouse you can securely and permanently delete files, folders and partitions.

The motives for the deletion of files are many. Old email files, internet history, file cache, financial records, company information, and private files ought to be protected from other's access. The reality, however, is much to the contrary. O&O SafeErase 3 puts a stop to this by not only deleting files, but by annihilating them with the help of recognized and recommended methods. In Windows Vista, Windows XP, Windows 2003 and Windows 2000, O&O SafeErase 3 will protect your computer from the unpermissive access of others to your alleged deleted files.

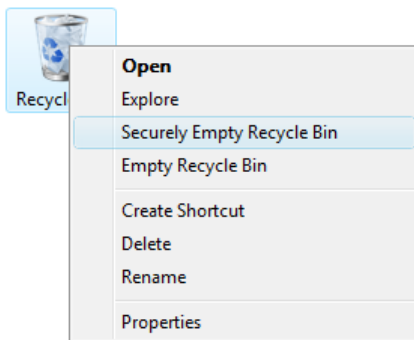

Assistant

New deletion assistant with more options

As well as the option with O&O SafeErase 3 for secure deletion over diverse context menus under Microsoft Windows, an Assistant is now at the user's disposal. You can use all functions of O&O SafeErase 3 with this Assistant and therefore not just delete individual files, folders or drives but also nested file or folder structures and various drives.

O&O TotalErase - erase an entire system with the push of a button

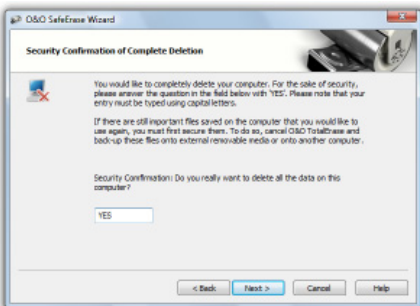

As a first in its field, O&O SafeErase 3 offers the user a completely new feature: The new fully-integrated "O&O TotalErase Assistant" now allows the deletion of an entire system including the system partition. Neither hackers nor data spies have a chance at getting to your deleted data. O&O SafeErase 3 is for private and corporate users alike, ensuring they have the necessary data protection and that thieves don't have a chance. With Version 3 it is now possible to delete an entire computer using all five levels of secure deletion.

O&O SafeErase at the Contextmenu

Five methods for your safety

O&O SafeErase 3 gives the user a choice of five different methods of deletion to satisfy a variety of needs. The methods of deletion differ in the number of times a file is overwritten and in the type of overwriting process used. These methods guarantee the maximum security, whatever your need may be. In addition to the standardized methods of erasure from the U.S. Department of Defense (DoD) and the German Department for Security in Information Technology (BSI, Bundesamt für Sicherheit in der Informationstechnik), you can choose the Gutmann method, which is appropriate for matters requiring the highest security. This scientifically approved method of data erasure overwrites the appropriate corresponding areas of the hard disk 35 times following precisely defined rules. As a result, O&O SafeErase 3 exceeds the requirements of DoD and BSI.

Security confirmation of complete deletion

Product Features

- Secure deletion of files and folders, as well as the secure disposal of data in the Recycle Bin
- Secure deletion of hard disks
- Secure deletion or "wiping" of free disk space
- Secure moving of files and folders
- Five methods for the secure deletion of your sensitive data
- Detailed creation of a deletion log
- Complete integration into Windows Explorer
- Secure deletion of entire system without boot media using O&O Total-Erase

System Requirements

- System with Intel® 486 (Pentium® recommended) or comparable processor
- 16 MB RAM (32 MB recommended)
- 10 MB free hard disk space
- CD ROM drive
- VGA Graphic Card with minimum 640x480 with 256 colors
- Keyboard and Mouse
- Windows 2000 (all Editions), Windows XP, Windows Server 2003 and Windows Vista (all Editions)
